## **Important Hot Tub Owner Information**

**Your Sundance hot tub is constructed to the highest standards and is capable of providing many years of trouble-free use. However, because heat retentive materials are utilized to insulate the hot tub for efficient operation, an uncovered hot tub surface directly exposed to sunlight and high temperatures for an extended period is subject to permanent damage. Damage caused by exposing the hot tub to this abuse is not covered by warranty. We recommend that you always keep the hot tub full of water when it is exposed to direct sunlight and that you keep the Sundance insulating cover in place at all times when the hot tub is not in use. Read and carefully follow the requirements for your hot tub's support base (found in the section titled, "Locating Your Sundance Hot tub").**

**Sundance Spas constantly strives to offer the finest hot tubs available, therefore, modifications and enhancements may be made which affect the specifications, illustrations and/or instructions contained herein.**

### **FCC Notice**

This equipment has been tested and found to comply with the limits for a Class B Digital Device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures: 1) Rearrange or relocate the receiving antenna. 2) Increase the separation between the equipment and receiver. 3) Connect the equipment into an outlet on a circuit different from the circuit connected. 4) Consult the dealer or an experienced radio/TV technician for help. (Changes or modifications not expressly approved by the party responsible for FCC compliance could void the user's authority to operate this equipment.)

## **IMPORTANT SAFETY INSTRUCTIONS: READ AND FOLLOW ALL INSTRUCTIONS CAREFULLY**

When installing and using this electrical equipment, basic safety precautions should always be followed, including:

- 1) **WARNING:** To reduce the risk of injury, do not permit children to use this product unless they are closely supervised at all times.
- 2) **WARNING:** A grounding wire connector is provided on this unit to connect a minimum No. 8AWG (8.4mm<sup>2</sup>) solid copper conductor between this unit and any metal equipment, metal enclosures of electrical equipment, metal water pipe, or conduit within 5 feet (1.5m) of the unit.
- 3) **DANGER:** *Risk of Accidental Drowning.* Extreme caution must be exercised to prevent unauthorized access by children. To avoid accidents, ensure that children cannot use this hot tub unless they are supervised at all times.
- 4) **DANGER:** *Risk of Injury.* The suction fittings in this hot tub are sized to match the specific water flow created by the pump. Should the need arise to replace the suction fittings or the pump, be sure that the flow rates are compatible. Never operate the hot tub if the suction fittings are broken or missing. Never replace a suction fitting with one rated less than the flow rate marked on the original suction fitting.
- 5) **DANGER:** *Risk of Electric Shock.* Install at least 5 feet (1.5m), from all metal surfaces. As an alternative, a hot tub may be installed within 5 feet of metal surfaces if each metal surface is permanently connected by a minimum No. 8 AWG (8.4 mm<sup>2</sup>) solid copper conductor attached to the wire connector on the grounding lug, inside the equipment compartment on the equipment box.
- 6) **DANGER:** *Risk of Electric Shock.* Do not permit any electrical appliance, such as a light, telephone, radio, television, etc. within 5 feet of a hot tub.
- 7) **ELECTRICAL SUPPLY:** The electrical supply for this product must include a suitably rated switch or circuit breaker to open all ungrounded supply conductors to comply with section 422-20 of the National Electrical Code, ANSI/NFPA 70. The disconnect must be readily accessible and visible to the hot tub occupant but installed at least 5 feet (1.5m), from the hot tub water.

8) **WARNING: To Reduce the Risk of Injury:**

- a) The water in a hot tub should never exceed 104 °F (40 °C). Water temperatures between 100 °F (38 °C) and 104 °F (40 °C) are considered safe for a healthy adult. Lower water temperatures are recommended for young children and when hot tub use exceeds 10 minutes.

**Note:** For exercise, the water temperature should not exceed 90 °F.

- b) Since excessive water temperatures have a high potential for causing fetal damage during the early months of pregnancy, pregnant or possibly pregnant women should limit hot tub water temperatures to 100 °F (38 °C). If pregnant, please consult your physician before using a hot tub.
- c) Before entering the hot tub, the user should measure the water temperature with an accurate thermometer since the tolerance of water temperature-regulating devices may vary as much as +/- 5 F (2 °C).
- d) The use of alcohol, drugs, or medication before or during hot tub use may lead to unconsciousness with the possibility of drowning.
- e) Persons suffering from obesity or a medical history of heart disease, low or high blood pressure, circulatory system problems, or diabetes should consult a physician before using a hot tub.
- f) Persons using medication should consult a physician before using a hot tub since some medication may induce drowsiness, while other medication may affect heart rate, blood pressure, and circulation.

**IMPORTANT SAFETY INSTRUCTIONS  
(CSA SAFETY INFORMATION)**

When using this electrical equipment, basic safety precautions should always be followed, including the following:

- a) **READ AND FOLLOW ALL INSTRUCTIONS.**

- b) A green colored terminal or a terminal marked G, Gr, Ground, Grounding or the  symbol\* is located inside the supply terminal box or compartment. To reduce the risk of electric shock, this terminal must be connected to the grounding means provided in the electric supply service panel with a continuous copper wire equivalent in size to the circuit conductors that supply this equipment.

\* IEC Publication 417, Symbol 5019.

- c) At least two lugs marked “Bonding Lugs” are provided on the external surface or on the inside of the supply terminal box/compartiment. To reduce the risk of electric shock, connect the local common bonding grid in the area of the hot tub to these terminals with an insulated or bare copper conductor not smaller than No. 6 AWG.
- d) All field-installed metal components such as rails, ladders, drains or other similar hardware within 3m of the hot tub shall be bonded to the equipment grounding bus with copper conductors not smaller than No. 6 AWG.
- e) **SAVE THESE INSTRUCTIONS.**

**WARNING:** Children should not use hot tubs without adult supervision.

**AVERTISSEMENT:** NE PAS LAISSER LES ENFANTS UTILISER LA CUVE DE RELAXATION SANS SURVEILLANCE.

**WARNING:** Do not use hot tubs unless all suction guards are installed to prevent body and hair entrapment.

**AVERTISSEMENT:** NE PAS UTILISER LA CUVE DE RELAXATION SI LES GRILLES DE PRISE D’ASPIRATION NE SONT PAS TOUTES EN PLACE, POUR EVITER QUE LES CHEVEUX OU UNE PARTIE DU CORPS SOIENT ASPIRES

**WARNING:** People with infectious diseases should not use a hot tub.

**AVERTISSEMENT:** LES PERSONNES ATTEINTES DE MALADIES INFECTIEUSES NE DEVRAIENT PAS UTILISER LA CUVE DE RELAXATION.

**WARNING:** To avoid injury, exercise care when entering or exiting the hot tub.

**AVERTISSEMENT:** POUR EVITER DES BLESSURES, SOYEZ PRUDENT EN ENTRANT ET SORTANT DE LA CUVE DE RELAXATION.

**WARNING:** Do not use drugs or alcohol before or during the use of a hot tub to avoid unconsciousness and possible drowning.

**AVERTISSEMENT:** POUR EVITER L'EVANOUISSEMENT ET LA NOYADE EVENTUELLE, NE PRENDRE NI DROGUE NI ALCOOL AVANT D'UTILISER LA CUVE DE RELAXATION NI QUAND ON S'Y TROUVE.

**WARNING:** Pregnant or possibly pregnant women should consult a physician before using a hot tub.

**AVERTISSEMENT:** LES FEMMES ENCEINTES, QUE LEUR GROSSESSE SOIT CONFIRMEE OU NON, DEVRAIENT CONSULTER UN MEDECIN AVANT D'UTILISER LA CUVE DE RELAXATION.

**WARNING:** Water temperature in excess of 40°C (104°F) may be injurious to your health.

**AVERTISSEMENT:** IL PEUT ETRE DANGEREUX POUR LA SANTE DE SE PLONGER DANS DE L'EAU A PLUS DE 40° C.

**WARNING:** Before entering the hot tub, measure the water temperature with an accurate thermometer.

**AVERTISSEMENT:** AVANT D'UTILISER UNE CUVE DE RELAXATION MESURER LA TEMPERATURE DE L'EAU A L'AIDE D'UN THERMOMETRE PRECIS.

**WARNING:** Do not use a hot tub immediately following strenuous exercise.

**AVERTISSEMENT:** NE PAS UTILISER LA CUVE DE RELAXATION IMMEDIATEMENT APRES UN EXERCICE FATIGANT.

**WARNING:** Prolonged immersion in a hot tub may be injurious to your health.

**AVERTISSEMENT:** RESTER TROP LONGTEMPS DANS LA CUVE DE RELAXATION PEUT ETRE DANGEREUX POUR LA SANTE.

**WARNING:** Do not permit electric appliances (such as lights, telephone, radio, television, etc.) within 1.5m (5 feet) of this hot tub.

**AVERTISSEMENT:** NE PAS PLACER D'APPAREIL ELECTRIQUE (LUMINAIR, TELEPHONE, RADIO, TELEVISEUR, ETC.) A MOINS DE 1.5M DE LA CUVE DE RELAXATION.

**CAUTION:** Maintain water chemistry in accordance with manufacturer's instructions.

**ATTENTION:** LA TENEUR DE L'EAU EN MATIERES DISSOUTES DOIT ETRE CONFORME AUX DIRECTIVES DU FABRICANT.

**WARNING:** The use of alcohol or drugs can greatly increase the risk of fatal hyperthermia in hot tubs.

**AVERTISSEMENT:** LA CONSOMMATION D'ALCOOL OU DE DROGUE AUGMENTE CONSIDERABLEMENT LES RISQUES D'HYPERTHERMIE MORTELLE DANS UNE CUVE DE RELAXATION.

## **SAVE THESE INSTRUCTIONS**

### **HYPERTHERMIA**

Prolonged immersion in hot water may induce hyperthermia. A description of the causes, symptoms, and effects of hyperthermia are as follows:

Hyperthermia occurs when the internal temperature of the body reaches a level several degrees above the normal body temperature of 98.6 °F, or 37 °C. The symptoms of hyperthermia include drowsiness, lethargy, and an increase in the internal temperature of the body. The effects of hyperthermia include:

- a) Unawareness of impending hazard;
- b) Failure to perceive heat;
- c) Failure to recognize the need to exit hot tub;
- d) Physical inability to exit hot tub;
- e) Fetal damage in pregnant women; and
- f) Unconsciousness and danger of drowning.

**A warning sign is provided in your warranty packet. Please install it at a location near your spa, where it is visible to the user of the spa. For additional or replacement signs please contact your local Sundance Spas dealer and reference item number 6530-082.**

## Cautions

1. Persons suffering from heart disease, diabetes, high or low blood pressure, and any condition requiring medical treatment, pregnant women, the elderly, or infants should consult with a physician before using a hot tub.
2. The Consumer Products Safety Commission has stated that the water temperature in a hot tub should not exceed 104°F (40°C). Immersion in water in excess of 104°F (40°C) can be hazardous to your health.
3. Observe a reasonable time limit when using the hot tub. Long exposures at higher temperatures can cause high body temperature. Symptoms may include dizziness, nausea, fainting, drowsiness, and reduced awareness. These effects could possibly result in drowning.
4. Do not use the hot tub under the influence of alcohol, narcotics, or other drugs. Use of the hot tub under these conditions may lead to serious consequences.
5. Always test the hot tub water temperature before entering the hot tub. Enter and exit the hot tub slowly. Wet surfaces can be very slippery.
6. Never bring any electrical appliances into or near the hot tub. Never operate any electrical appliances from inside the hot tub or when you are wet.
7. Proper chemical maintenance of hot tub water is necessary to maintain safe water and prevent possible damage to hot tub components.
8. Use the straps and clip tie downs to secure the cover when not in use. This will help to discourage unsupervised children from entering the hot tub and keep the hot tub cover secure in high-wind conditions. There is no representation that the cover, clip tie-downs, or actual locks will prevent access to the hot tub.
9. For exercise, the water should not exceed 90°F.

## Locating Your Sundance Hot tub

**IMPORTANT:** Because of the combined weight of the hot tub, water and users, it is extremely important that the base upon which the hot tub rests be smooth, flat, level and capable of uniformly supporting this weight, without shifting or settling, for the entire time the hot tub is in place. If the hot tub is placed on a surface which does not meet these requirements, damage to the skirt and/or the hot tub shell may result. Damage caused by improper support is not covered under warranty. It is the responsibility of the hot tub owner to assure the integrity of the support over time.

We recommend a poured, reinforced concrete slab (minimum of 4 inches thick). Wood decking is also acceptable provided it is constructed so that it meets the requirements outlined above.

The hot tub must be installed in such a manner as to provide drainage away from the hot tub. Placing the hot tub in a depression without provisions for proper drainage could allow rain, overflow and other casual water to flood the equipment and create a wet condition in which it would sit.

For hot tubs which will be recessed into a floor or deck, install so as to permit access to the equipment, either from above or below, for servicing. Make certain that there are no obstructions which would prevent removal of the cabinet side panels, especially on the side with the equipment bay doors.

In selecting the ideal *outdoor* location for your hot tub, we suggest that you take into consideration 1) the proximity to change area and shelter (especially in colder weather); 2) the pathway to and from your hot tub (this should be free of debris so that dirt and leaves are not easily tracked into the hot tub); 3) the closeness to trees and shrubbery (remember that leaves and birds could create extra work in keeping the hot tub clean); 4) a sheltered environment (less wind and weather exposure can result in lowered operation and maintenance costs); and 5) the overall enhancement of your environment. It is preferable *not* to place the hot tub under an ungluttered roof overhang since run-off water will shorten the life expectancy of the hot tub cover.

For *indoor* installations, be certain to make provisions for proper ventilation. When the hot tub is in use, considerable amounts of moisture will escape. This can damage certain surfaces over time.

If you have any questions regarding the placement or installation of your hot tub consult your Sundance Dealer.

## **General Electrical Safety Instructions**

Your new Sundance hot tub is equipped with the "state-of-the-art" Sentry™ equipment system. It contains the most advanced safety and self-protective equipment in the industry. Nonetheless, this hot tub must be installed properly to insure dependable usage. Please contact your dealer or local building department should you have any questions regarding your installation.

Proper grounding is extremely important. Sundance hot tubs are equipped with a current collector system. A pressure wire connector is provided on the surface of the control box, located inside the equipment door (See Ill. 3, item 2) to permit connection of a bonding wire between this point and any ground metal equipment, metal water pipe or conduit within 5 feet (1.5m) of the hot tub, or copper clad grounding rod buried within 5 feet (1.5m) of the hot tub. Bonding wire must be at least No. 8 AWG (8.4 mm<sup>2</sup>) solid copper wire. This is a most important safety assurance feature.

Before installing this hot tub, check with the local building department to insure installation conforms to local building codes.

**III. No. 2  
Terminal Block  
240V Wire Connection**

## Electrical Installation Instructions For Connection to 240V Service

**IMPORTANT NOTICE:** The electrical wiring of this hot tub must meet the requirements of the National Electrical Code (NEC) and any applicable state or local codes. The electrical circuit must be installed by a qualified electrician and approved by a local building/electrical inspection authority.

1. This hot tub must be permanently connected (hard-wired) to the power supply. **No plug-in connections or extension cords are to be used in conjunction with the operation of this hot tub.** Supplying power to the hot tub which is not in accordance with these instructions will void both the independent testing agency listing and the manufacturer's warranty.
2. The power supplied to this hot tub *must* be a *dedicated* circuit with no other appliances or lights sharing the power provided by the circuit.
3. To determine the current, voltage and wire size required, refer to the power supply table on page 12.
  - Wire size must be appropriate per NEC and/or local codes.
  - We recommend type THHN wire.
  - All wiring must be copper to ensure proper connections. **Do not use aluminum wire.**
  - When using wire larger than #6, add a junction box near the hot tub and reduce to short lengths of #6 wire to connect to the hot tub.
4. The electrical supply for this product must include a suitably rated switch or circuit breaker to open all ungrounded supply conductors to comply with Section 422-20 of the National Electrical Code, ANSI/NFPA 70. The disconnecting means must be readily accessible to the hot tub's occupant but installed at least 5 feet (1.5m) from hot tub water.
5. The electrical circuit supplied for the hot tub must include a suitable ground fault circuit interrupter (GFCI) as required by NEC Article 680-42.
6. To gain access to the hot tub's power terminal block, remove the four screws securing the center cabinet panel on the side of the hot tub under the controls. Then open the door to the control box. (Ill. No. 1, item 1).
7. Select the power supply inlet you want to use (Ill. No. 1, item 2) and remove the short cabinet panel from the front of the hot tub to allow you to feed the cable through to the control box. Install the cable with connector through the large opening provided in the bottom of the control box.
8. Connect wires, color to color, on terminal blocks TB1 and TB3 (Ill. 2). **TIGHTEN SECURELY!** All wires must be hooked up or damage could result.
9. Close the control box door and reinstall the cabinet side panels.

**Table No. 1  
POWER SUPPLY OPTIONS AND REQUIREMENTS**

Sundance hot tubs are designed to provide optimum performance and flexibility of use when connected to the maximum electrical service as listed below. However, they are shipped configured for – 50A, 240V or 45A, 230V export. In 60A heater turns off when all three pumps are on high.

If you prefer, your Sundance dealer can perform a minor circuit board modification to allow the hot tub to accept different electrical service. The operational considerations of these modifications are listed in the footnotes below.

	<b><u>240V/40A</u> **</b>	<b><u>240V/50A</u> *</b>	<b><u>240V/60A</u></b>
Voltage	240 volts	240 volts	240 volts
Current Draw	32 amps	40 amps	48 amps
Number of Wires	Three	Three	Three
Circuit Breaker	40 amp dual pole	50 amp dual pole	60 amp dual pole.

	<b><u>230V/40A</u> **</b>	<b><u>230V/45A</u> *</b>	<b><u>230V/50A</u></b>
Voltage	230 volts	230 volts	230 volts
Current Draw	26 amps	34 amps	42 amps
Number of Wires	Three	Three	Three
Circuit Breaker	40 amp dual pole	45 amp dual pole	50 amp dual pole

\* In this configuration, the heater will not operate while any two pumps are operating at high speed.

\*\* In this configuration, the heater will not operate at the same time as any high speed pumps.

## **Start Up Instructions**

**FOR BEST RESULTS, READ EACH STEP IN ITS ENTIRETY BEFORE PROCEEDING WITH THAT STEP.**

### **1. PREPARE THE HOT TUB FOR FILLING**

- Clear all debris from the hot tub. (Although the hot tub shell has been polished at the factory, you may want to treat it with a specially formulated hot tub cleaner and wax available from your dealer prior to filling the first time.)
- Remove the filter lid (Ill. 5 ,item 11), then remove the filter cartridge by loosening the retainer nut on the pipe at one end of the filter and sliding the filter toward the nut until the other end is free. Lift the filter out as you pull it away from the filter pipe.

### **2. FILL THE HOT TUB**

- Place the end of your garden hose into the pipe exposed when you removed the filter cartridge.

**NOTE:** Never fill with water from a water softener.

- Fill the hot tub until the water level is midway in the skimmer opening and above all jets.

**Important:** Always fill your hot tub through the filter pipe after draining. Failure to do so may cause air to be trapped in the pump, preventing the pump from circulating water.

- Remove the hose and replace the filter cartridge by sliding it back onto the pipe then securing one of the protruding tabs on the other end under the retainer bracket. Tighten the retainer nut only until it is snug, do not over tighten.

### 3. TURN ON THE POWER

Turn on the power to the hot tub at the home's circuit breaker. The heater and the pump's low speed automatically activate and the LCD display on the control panel flashes the water temperature and "COOL" (Pg. 30).

### 4. ACTIVATE JETS

Depress the **JETS 1** sensor pad on the control panel to activate the pump's high speed and initiate maximum water flow to certain jets.

### 5. ADD START-UP CHEMICALS

Refer to ISO-Pure instructions. (See the section titled WATER QUALITY MAINTENANCE for general guidance.)

### 6. SET HOT TUB TO HEAT

To warm the hot tub water up to a comfortable temperature, follow these steps:

- The LCD display on the control panel displays the actual temperature of the hot tub water. Press either the **DOWN** or **UP** sensor pad to display the "set" temperature for 5 seconds. If you want the water to heat to a different temperature, simply press **DOWN** or **UP** within 5 seconds. The set temperature advances or decreases by one degree each time one of these sensor pads is pressed.
- The heater will turn off when the temperature corresponding to the thermostat setting is achieved.

#### **NOTE:**

- *The maximum temperature for which the hot tub can be set is 104 °F (40 °C) and the minimum is 80 °F (27 °C)*
- *Setting the thermostat at maximum will not accelerate the heating process. This will only result in a higher ultimate temperature.*
- *If hot tub is hooked up to 40 amps - turn off high speed pump to operate heater.*

### 7. PLACE COVER ON HOT TUB

- Keeping the insulating cover in place anytime the hot tub is not in use will reduce the time required for heating, thereby minimizing operating costs.

- The time required for initial heat-up will vary depending on the starting water temperature.

**DANGER. RISK OF INJURY.** *Always check water temperature carefully before entering hot tub.*

**DO NOT EXERCISE IN WATER ABOVE 90 DEGREES F**

## Operating Instructions

Your Sundance hot tub has a touch-sensitive control panel, Massage Selector valves and air control knobs located on the top rim of the hot tub (See Ill. 5). These controls let you operate many of the special functions of your Sundance hot tub. By familiarizing yourself with the following information, you will be able to gain the full benefit afforded by the various functions of your hot tub.

### VIEW

Pressing the sensor pad labeled **VIEW** inverts the main four-digit display on the Command Center's LCD screen to allow easy reading from either inside or outside the hot tub.

### LIGHT

The **LIGHT** sensor pad activates both the underwater light and the light symbol on the LCD screen when touched. To reduce the brightness of the light, touch the sensor pad again. A third touch will result in an even lower level of illumination. A fourth touch turns the light off. If left on, the light will automatically turn off after one hour.

**PERIMETER LIGHT** - See programming section.

### JETS 1

The sensor pad labeled **JETS 1** controls pump 1.

### JETS 2

The sensor pad labeled **JETS 2** controls pump 2.

### JETS 3

The sensor pad labeled **JETS 3** controls pump 3.

***Auto Turn Off** - Anytime a jet pump has been manually turned on, it will automatically turn off after approximately 20 minutes. If at this time you desire more jet operation you may simply turn the pump(s) back on.*

### III. No. 4.1 COMMAND CENTER

These display temperature setting and increase or decrease temperature setting and other programmable features.

Accesses filter cycle program mode and advances display to next cycle.

Scrolls menu through filter cycle programming features.

Inverts the main 4-digit display.

Controls the hot tub light (bright, dim, off).

Pump 1.

Pump 2.

Pump 3.

Displays time of day and available pH and ORP. Initiates time setting and locking functions.

Switches between standard and economy modes.

### III. No. 4.2 LCD SCREEN

Indicates panel, set temperature or filter cycle programming locked.

Indicates heater on.

Indicates ISO-Pure on.

Indicates filter cycle in progress (page 17) or displays cycle programming features.

These characters identify what is being shown on the main 4-digit display

Indicates operating mode selected.

Indicates hot tub light is on (changes according to brightness selected).

Indicates pump 1.

Indicates pump 2.

Indicates pump 3.

### III No. 5 Top View Hot Tub

- |                               |                                |
|-------------------------------|--------------------------------|
| 1. Control Panel              | 7. Massage Selector Valve "B"  |
| 2. Auxiliary Control Panels   | 8. Therapy Jets (Intelli-jets) |
| 3. Air Controls               | 9. Vertical Jets               |
| 4. Therapy Seat "A"           | 10. Light                      |
| 5. Massage Selector Valve "A" | 11. Filter                     |
| 6. Therapy Seat "B"           | 12. Heater Return              |

## SELECTING THE DESIRED MASSAGE ACTION

Your Sundance hot tub is equipped to allow you the customized massage action you desire. By simply diverting the massage selectors “A” and “B” you control a full range of therapeutic pressures to each therapy seat independently. Both the Intelli-jets and therapy seat “B” are fully adjustable by allowing a wide range of speed and flow control right at the jet face.

Do not ever turn off all jets at the same time.

## ADJUSTING THE INTELLI-JETS

With the nozzles of the Intelli-Jets positioned straight ahead, the jet stream will be stationary. Pushing the nozzle to one side causes the jet nozzle to rotate, moving the jet stream in a circular pattern. The speed of the rotation and volume of water flow can be adjusted by rotating the jet face.

## AIR CONTROLS

Each jet system has its own air control. These controls allow you to regulate the amount of air which is mixed with the water entering through the jets. Clockwise rotation adds more air and counter-clockwise rotation reduces air flow. To minimize heat loss, these controls should be closed when the hot tub is not in use.

## Automatic Filtration Cycles

### FILTRATION CYCLES

Your hot tub's control system activates automatic filter cycles, during which the low speed of the hot tub's primary jet pump turns on to move water through the filter. This water movement also provides important skimming action to remove debris and suspensions from the water's surface, minimizing the “bathtub ring” effect.

When an automatic filter cycle activates, the LCD screen displays the following message:

**FILTER  
CYCLE                    ON**

**NOTE:** *After a long filter cycle, you may notice that the water temperature is greater than the temperature setting. This can happen in such a well insulated hot tub because, even though the heater turns off as intended, the transference of heat from the pump continues to add warmth to the water.*

### **Pre-Set Filter Cycles**

*Your hot tub comes with four 30-minute "heater on" filter cycles already programmed in, beginning at 6:00 a.m., noon, 6:00 p.m. and midnight. You can easily change the start time, the cycle length and/or heater status for any of these cycles to suit your individual needs by following the steps in the next section.*

### **Clean Up Cycle:**

*Clean up cycle is once per day in both Standard and Economy mode at 12:00 PM for two minutes. This is not user programmable. Pump 2 activates for one minute to circulate any water in the plumbing. After 1 minute it goes off and Pump 3 runs for 1 minute.*

## **Programming Instructions**

### **ADJUSTING THE TIME OF DAY**

The Sentry control system remembers the time of day even in the event of a prolonged power outage. However, it may occasionally be necessary to re-set the time of day. For example: if you are not in the Pacific Time Zone you will want to reset the time for your own time zone. (The system will automatically adjust to and from daylight savings time.)

To accomplish this, press **DISPLAY, MODE** and **DISPLAY** within five seconds each. A number representing the hour will be displayed, followed by **AM** or **PM**. The hour will advance or decrease each time **UP** or **DOWN** is pressed within five seconds. Then, press **DISPLAY** again to display the minutes. Adjust the minutes as necessary by pressing **UP** or **DOWN**. After 5 seconds, the display will return to normal.

### **CHANGING THE FILTER CYCLES**

The Sentry Control System allows you to easily adjust three separate aspects of each of the filtration cycles (1) the time of day at which each cycle begins, (2) the duration of each cycle and (3) whether or not the heater is allowed to operate during each cycle.

To make adjustments, first press **CYCLE** to enter the filter cycle programming mode. The LCD screen will display the following in the upper right corner:

**ADJUST  
FILTER  
CYCLE**

**START TIME**

This means the system is ready to accept your changes to the start time for filter cycle number one. Simultaneously, the large four-digit display in the center of the screen displays the currently programmed start time for that filtration cycle.

At this point, you have four options. You may:

- (1) Press **UP** or **DOWN** to adjust the start time in increments of 30 minutes.
- (2) Press **CYCLE** to progress to adjusting each subsequent filter cycle. With each press, the currently programmed status will be shown in the large four digit display. To adjust any of the programming, simply press **UP** or **DOWN**.
- (3) Press **SELECT** to move down the menu from Start Time to Duration, then to heater on/off. With each press, the currently programmed status will be shown in the large four-digit display. Press **UP** or **DOWN** to adjust the duration in increments of 15 minutes.
- (4) Press **DISPLAY** to make the filter cycle programming characters disappear from the screen and the main display return to showing the water temperature. If no sensor is pressed within 30 seconds, the screen automatically returns to normal display.

At any time, you may check the programming of any aspect of any filter cycle by first pressing **CYCLE** then moving through the menu by pressing either **CYCLE** or **SELECT**. The programming is changed only by pressing **UP** or **DOWN** during this process.

### **Programmable Operation Time for Perimeter Light**

The Sentry control system allows you to easily adjust two separate aspects of Perimeter Light operation.

1. The time of day at which the Perimeter Light begins operating.
2. The duration of the Perimeter Light on time. Maximum duration is 6 hours.

The factory default start time is 6:00 PM. The default duration is set for 3 hours. To make adjustments, press the sensor labeled **CYCLE** five times to enter the Perimeter Light programming mode. The LCD screen will display **ADJUST Lite**. At this time the system is ready to accept your changes.

- Press the **SELECT** sensor once. The previously programmed start time appears on the LCD display.

- Press **UP** or **DOWN** sensors to adjust the start time in 30-minute increments.
- Press the **SELECT** sensor to program duration.
- Press **UP** or **DOWN** sensors to program the duration time in 15 minute increments.
- Press **DISPLAY** to make the Perimeter Light programming characters disappear from the screen and the main display return to showing the water temperature. If no sensor is pressed within 30 seconds, the screen will automatically return to normal display

**CAUTION:** For Perimeter Light, do not use any bulb larger than 6 watts.

### **LOCKING THE FILTER CYCLES**

You may keep the filter cycle programs from being inadvertently altered by electronically “locking” them. To accomplish this, simply press **CYCLE** then, within 30 seconds, press **DISPLAY, MODE** and **UP**, within five seconds each. A padlock symbol will appear on the screen. In this state, the status of the cycle programming may be checked, but may not be altered.

To unlock the filter cycle programming to make changes, simply press **DISPLAY, MODE** and **DOWN** within five seconds each.

### **CHOOSING THE “STANDARD” OR “ECONOMY” MODE**

Pressing **MODE** switches your hot tub between the “standard” and “economy” operating modes. The mode currently selected is displayed on the right side of the LCD screen. By selecting the appropriate operating mode, you can ensure that your hot tub will be ready to use when you want it with the lowest possible energy consumption.

#### **Standard Mode**

In the standard mode, the hot tub water temperature will always be held at the set temperature. The heater will turn on as needed to maintain the hot tub water temperature you have set with the temperature control. When the desired temperature has been achieved, the heater will turn off. In addition, when in the “standard” mode, the filter cycles will operate the low speed pump as programmed to provide skimming action and additional filtration.

#### **Economy Mode**

In the economy mode, the low speed pump will turn on automatically only during the filter cycles. During these cycles, the heater will operate only if the actual water temperature is lower than the set desired temperature.

## PANEL LOCK

To help prevent unauthorized use of your hot tub, the Sentry controls incorporate a unique panel locking system which disables the controls on the panel.

### To Lock The Panel:

Press the **DISPLAY, MODE**, and **UP** sensor pads, in order, within five seconds. A padlock symbol will appear on the LCD screen. With the panel locked, none of the components can be turned on and the only settings that can be adjusted are the standard/economy operating mode and changing the time of day. All automatic hot tub functions will operate normally.

### To Unlock The Panel:

Press **DISPLAY, MODE**, and **DOWN**, in order, within five seconds. The “lock” symbol will disappear. All sensor pads are now active.

## TEMPERATURE SETTING LOCK

To electronically lock the temperature setting, first enter the “temperature setting” mode by pressing **UP** or **DOWN**. Then, within five seconds, press the three sensors described under “Panel Lock” above. This will prevent the temperature setting from being changed by unauthorized persons but all other sensors will remain active.

To unlock the temperature setting so that it can be adjusted, simply follow the instructions above under “**To Unlock the Panel.**”

## ISO-Pure™ Water Management System

### ISO-PURE START-UP AND OPERATING INSTRUCTIONS

The ISO-Pure Water management System is a chlorine generating system. When you add sodium chloride to the hot tub water, the system will produce chlorine. Chlorine is an excellent hot tub water sanitizer when maintained at 3–5 PPM level. Use your test kit to frequently check your sanitizer level.

**CAUTION:** Never store hot tub chemicals inside the hot tub's equipment bay.

**Step 1:** Make sure water temperature is at least 60° F.

**Step 2:** Once the water temperature is 60 degrees F, turn on the high speed of one or two jet pumps. Add Aqualibrium per instructions on container and allow it to circulate with the jet pumps on high for 15 minutes.

Note: With future start-ups, the control panel may flash “cell” until sodium chloride is added to the water. No action is required unless “cell” continues to flash after salt is added.

**Step 3:** Add shock treatment as follows:  
 With jet pumps on high, add Sodium Dichlor per instructions on container to quickly oxidize any contaminants that may be present.

**Step 4:** Add sodium chloride as follows:  
 With jet pumps on high, add nine (9) bags of ISO-Pure sodium chloride. Once the sodium chloride is completely dissolved, use an AQUACHECK test strip to check the sodium chloride concentration. The ISO-Pure system is most effective when the sodium chloride level is 1800 to 2000 PPM.

**Step 5:** Check pH and Total Alkalinity.  
 Using the test strips included in your start-up kit, test the Total Alkalinity and pH levels. If necessary, adjust the Total Alkalinity first and then the pH level.

**The National Spa & Pool Institute Recommended Level**

	<b>Minimun</b>	<b>Ideal</b>	<b>Maximum</b>
Total Alkalinity	60	80-100	180
pH	7.2	7.4-7.6	7.8

**Step 6:** Programming the ISO-Pure system.  
 The ISO-Pure system utilizes the hot tub electronic controller to maintain the level of chlorine with a minimum effort. The ISO-Pure system has been pre-programmed from the factory to operate 20 minutes per day, which is the minimum time needed to maintain the chlorine level in the hot tub water when the hot tub is not being used.

Use the chart below to select the proper duration setting for programming your ISO-Pure system.

<b>Persons In Spa</b>	<b>Average Days Used per week</b>	<b>Multiply by</b>	<b>Duration Setting</b>
_____ X	_____	X 20	= _____

**Note:** The maximum duration setting available for your ISO-Pure system is 990 minutes per day to prevent excessive chlorine generation. During heavy hot tub use it will be necessary to supplement your ISO-Pure system with Sodium Dichlor.

### To Program ISO-Pure Operation.

Press the **DISPLAY** button and then the **SELECT** button to display the duration on the hot tub control panel.

Press the **UP** or **DOWN** buttons to either increase or decrease the ISO-Pure operating time duration. The duration may be changed by 10 minute increments.

**NOTE:** If the duration does not display, this means your controller is not in ISO-Pure mode. To select the ISO-Pure mode, press the **DISPLAY** button and then the **MODE** button twice to display the program selection name. It should read **o3**. Press the **UP** button to change it to **ISo**. Your program selection is completed. You are ready to program ISO-Pure operation.

Once your duration setting is programmed, do not change it until or unless there is a relatively permanent change in level of hot tub usage. To accommodate intermittent, heavier than normal use, such as a party or get-together, test for chlorine level and use Sodium Dichlor shock per instructions on container to raise the residual if the system does not recover to appropriate range within 24 hours of using the spa.

### The National Spa & Pool Institute Recommended Operating Range

	<b>Minimum</b>	<b>Ideal</b>	<b>Maximum</b>
Free Chlorine, PPM	2	3-5	10

**Do not attempt to control the residual level with frequent adjustments to your duration setting.**

### **Step 7:** Activating your ISO-Pure system.

The ISO-Pure system is activated automatically two minutes into the operation of any jet. This two-minute program delay ensures that the ISO-Pure is not activated every time any **JET** button is pressed but only when the hot tub is actually being used. This is designed to help prevent excess chlorine production and it allows demonstration of the hot tub without continuous activation of the ISO-Pure system.

If the hot tub is used without operating the jets, we recommend you operate them for at least two minutes upon exiting the hot tub in order to activate the ISO-Pure System and its sanitizing cycle

**CAUTION:** Never store hot tub chemicals inside the hot tub's equipment bay.

### **pH control**

pH is a measure of relative acidity or alkalinity of water and is measured on a scale of 0 to 14. The midpoint of 7 is said to be neutral, above which is alkaline and below which is acidic.

### **Calcium particles on spa floor**

At times you may see small white calcium particles on the floor of the hot tub. This is normal and is caused by the process that generates chlorine. The particles will eventually be made smaller and drawn into the filter as the hot tub is being used.

### **Basic water conditions**

Water conditions vary depending on where you are located. Your hot tub dealer will advise you of any treatments required to ensure the best water quality in your area.

### **To turn off your ISO-Pure system:**

If for any reason you decide that you want to turn your ISO-Pure system completely off, first, on the control panel, press **SELECT** and then press the **DOWN** arrow, the display will show **L\_of**. To turn the system on, press **SELECT** and then press the **UP** arrow, the display will show **L\_on**.

### **Cleaning cycle**

The ISO-Pure system will automatically turn on the hot tub water pump #1 for five minutes as part of its normal cleaning cycle to remove excess calcium from the ISO-Pure generator. The water purification icon will flash on the control panel LCD display during the cleaning cycle. The cleaning cycle occurs every 250 minutes of ISO-Pure operation and lasts approximately five minutes. During this five-minute period the **JET** buttons will not function in their normal fashion. This cleaning cycle is completely automatic and will keep your ISO-Pure cell in maximum operating condition 24 hours per day for many years.

### **Important Notes:**

**1. Always check the chlorine level prior to entering the hot tub water. (Refer to earlier chart). Adjust as necessary. Do Not use the hot tub unless the chlorine level is between 2 and 10 PPM.**

**2. Test the Total Alkalinity and pH on a weekly basis.** (Refer to table on Page 22.)

**3. During times of increased hot tub use,** you may find that you consistently have a low chlorine level. Although the ISO-Pure system is designed to maintain the proper level of chlorine, Sodium Dichlor may be added to your hot tub water to help accelerate the recovery of the chlorine level in your hot tub water.

**4. If the hot tub water ever looks cloudy or green, please complete the following steps:**

- A.** Check your hot tub's filter and rinse it with a garden hose. If it is particularly dirty, use a filter-cleaning product and then soak it in a solution of common household bleach (about one cup of bleach per one gallon of water). The filter should remain totally covered by this solution for at least 15 minutes.
- B.** Check the Total Alkalinity and pH of your hot tub water. Adjust Total Alkalinity first and then adjust pH.
- C.** Check the chlorine level in the hot tub water. Add Sodium Dichlor per, instructions on container, operate the hot tub pumps(s) for 15 minutes then retest the hot tub water. Continue adding Sodium Dichlor until the chlorine level reaches 3-5 PPM.

**5. Sundance recommends that you inspect and clean your hot tub cartridge filter with a garden hose on a weekly basis** depending on usage and water quality. If it is particularly dirty, use a filter cleaning product and then soak it in a solution of common household bleach (about 1 cup of bleach per 1 gallon of water) for 15 minutes.

## Hot Tub Maintenance

Proper and regular maintenance of your hot tub will help it retain its beauty and performance. Your authorized Sundance Dealer can supply you with all the information, supplies and accessory products you will need to accomplish this.

### III. No. 6 Cartridge Filter Removal

## CLEANING THE FILTER

Your Sundance hot tub is equipped with a cartridge filter located in the skimmer/filter well (Ill. 5, item 11). Filtering is accomplished when the dual-speed pump, on either high or low speed, causes water to flow through the polyester mesh of the filter. As this happens, suspended particles become trapped on the filter's surface (Ill. 6).

To ensure optimum performance, it is necessary to remove and clean the filter cartridge, usually once a week, depending on usage and water quality. To accomplish this, follow these steps:

1. Turn off power to the hot tub at the home's breaker panel.
2. Remove the filter lid (Ill. 5, item 11).
3. Remove the filter cartridge by loosening the retainer nut on the pipe at one end of the filter and sliding the filter toward the nut until the other end is free of the retainer bracket. Lift the filter out as you pull it away from the filter pipe.
4. Using a garden hose with a high-pressure nozzle, rinse debris from the filter pleats beginning at the top and working your way downward. Continue, one section at a time, until you have rinsed all of the filter's pleats.

Periodically, the filter cartridge will need a more thorough cleaning to remove imbedded oils and minerals. For this, we suggest cleaning as above and then soaking the cartridge overnight in a plastic container filled with a solution of water and a specially formulated filter cleanser available from your Sundance dealer.

Replace the filter cartridge by sliding it back onto the pipe then securing one of the protruding tabs on the other end under the retainer bracket. Tighten the retainer nut only until it is snug – **do not over tighten**.

The average life expectancy of a Sundance filter cartridge is approximately two years with proper care and water quality maintenance. A replacement cartridge may be purchased from your Sundance Dealer.

**NOTE:** Nylon suction filters need to be cleaned periodically for optimum performance of all Jets.

## DRAINING AND REFILLING

About every 6 to 9 months, you will want to replace the hot tub's water. The frequency depends on a number of variables including the amount of use, attention paid to water quality maintenance, etc. You will know it is time for a change when you cannot control sudsing and/or you can no longer get the normal feel or sparkle to the water even though the key water balance measurements are all within the proper parameters.

**WARNING!** READ THIS BEFORE DRAINING: To prevent damage to the hot tub's components, **turn off power to the hot tub at the circuit breaker before draining it.** Do not turn the power back on until your hot tub has been refilled.

**CAUTION:** There are certain precautions to keep in mind when draining your hot tub. If it is extremely cold, and the hot tub is outdoors, freezing could occur in the lines or the equipment (see "WINTERIZING", page 28). On the other hand, if it is hot outdoors, do not leave the hot tub's surface exposed to direct sunlight for long periods.

To drain your hot tub using the drain port provided, **first turn off the power to the hot tub at the circuit breaker.** Then remove the center panel from the side of the cabinet under the control panel. The drain port is secured to the base inside the door and features a white "T" handle (Ill. 1, item 7). To attach a garden hose, replace the fitting screwed into the end of the drain port with the fitting provided with your hot tub (in the plastic bag with your colored lenses). For faster draining, a special, large-diameter drain hose is available from your Sundance dealer.

Once the hose is connected and the end placed where you want the water to drain, open the valve by pulling the "T" handle outward from the pipe.

After draining, always remember to close the "T" handle valve *and reinstall the threaded plug* (to prevent water from seeping past the valve) prior to refilling. After refilling, turn on power to the hot tub and follow the steps listed under "Start Up Instructions".

## **CLEANING THE INTERIOR OF THE HOT TUB**

To preserve the sheen of your hot tub's surface, it is crucial that you avoid using abrasive cleaners or cleaners which have adverse chemical effect on the surface. If you are not certain as to the suitability of a particular cleanser, consult your authorized Sundance Dealer.

Regardless of the cleanser used, use extreme care to assure that no soap residue is left on the surface. This could cause severe sudsing when the hot tub is refilled.

Your Sundance Dealer offers a specially formulated surface sealant which aids in cleaning the hot tub surface and adds a protective coating to enhance the luster of the surface. This product should also be occasionally applied to the stainless steel grab rails and accents in the hot tub to help preserve their appearance.

## **PILLOW CARE**

Remove and clean the headrest pillows regularly with soapy water using a cloth or soft-bristle brush. To maintain water resistance and luster, apply a quality vinyl conditioner once a month.

Always remove the pillows when adding chemical shock treatment to the hot tub water. The pillows can be returned to the hot tub when the sanitizer reading drops below 5 ppm.

**IMPORTANT:** When removing pillows equipped with suction cups, always slide them upwards until the suction cups release from the hot tub's surface. Never pull the pillows straight out from the hot tub as this will likely cause the suction cups to permanently separate from the pillow.

(Pillow damage or deterioration caused by improper care is not covered by the hot tub's warranty.)

### **MAINTAINING THE WOOD CABINET**

With time and exposure to the elements, the wood on your hot tub will tend to lose its new appearance. Protecting or reviving the wood surfaces is a fairly simple process. Light sanding with fine-grit sandpaper will help smooth any roughness and regular applications of a penetrating wood preservative will enhance and protect the richness of the wood. A specially formulated wood stain available from your Sundance dealer is ideal for this.

**NOTE:** *Do not apply varnish, shellac or other surface sealants to the wood. These tend to react with the chemicals in the wood and the UV rays of the sun, causing yellowing, flaking and peeling.*

### **MAINTAINING THE COVER**

Using the Sundance insulating hot tub cover anytime the hot tub is not in use will significantly reduce your operating costs, heat-up time and maintenance requirements. To prolong the life of the cover, handle it with care and clean it regularly using mild soap and water. Periodic treatments with a special conditioner developed for Sundance hot tub covers will help protect against deterioration caused by U.V. rays from the sun. Never allow anyone to stand or sit on the cover, and avoid dragging it across rough surfaces.

### **WINTERIZING**

Your Sundance hot tub is designed to automatically protect itself against freezing when operating properly. During periods of severe freezing temperatures, you should check periodically to be certain that the electrical supply to the hot tub has not been interrupted. In extreme, bitter cold weather (less than -20°F) reset the filter cycles for 24-hour operation to protect the hot tub (i.e. four 6-hour cycles).

If you do not intend to use your hot tub, or if there is a prolonged power outage during periods of severe freezing temperatures, it is important that all

water be removed from the hot tub and equipment to protect against damage from freezing.

**For expert winterization of your hot tub, contact your authorized Sundance Dealer.** In emergency situations, damage can be minimized by taking the following steps:

### **Caution: Turn off power to hot tub.**

1. Follow the directions on page 26 for draining the hot tub.
2. As the water level drops below the seats, use whatever means necessary to get the water out of the recessed seating areas and into the footwell.
3. When the water level ceases to drop, use whatever means available to remove any remaining water from the footwell)
4. Remove the equipment-side cabinet panels and locate the drain plugs in the front of the pump(s) (see Ill. 1, item 8). Remove these plugs to allow the water to drain out of the pumps and heater. (Note: Approximately one to two gallons will be released during this procedure. Use a wet/dry vacuum or other means to keep this from flooding the equipment compartment.) Replace the drain plugs.
5. Loosen the hose clamp at the bottom of the heater (Ill. 1, item 6) and pull this hose off of the heater fitting (twist the hose back and forth while pulling downward). Tip the hose down and allow to drain.
6. Re-install the cabinet side panels and cover the hot tub so that no casual moisture can enter the hot tub.

Consult your Sundance Dealer if you have any questions regarding winter use or winterizing.

### **RE-STARTING YOUR HOT TUB IN COLD WEATHER**

If you want to start up your hot tub after it has sat empty for a time in freezing temperatures, be aware that the water remaining in certain sections of the piping may still be frozen. This situation will block water flow preventing the hot tub from operating properly and possibly damaging the equipment. We recommend you consult your dealer for guidance before attempting to re-start your hot tub under these conditions.

## **Water Quality Maintenance**

### **OPTIONAL CHECKMATES™ WATER QUALITY MONITOR**

A dealer-installed option available for your hot tub allows you to see the pH and the sanitizing capabilities (ORP) of the water at the touch of a button. The CheckMates Water Quality Monitor accurately displays these values on the hot tub's LCD screen.

## Troubleshooting

### DISPLAY MESSAGES

There are a number of unique functions designed into your Sundance hot tub to protect it from damage and/or to aid in troubleshooting. Following is a listing of all the possible messages along with their meanings:

#### MESSAGE

#### MEANING

OH

Overheat Protection (Heater is deactivated, pump's low speed is activated). Water temperature is above acceptable limits. Do not enter the water! Remove hot tub cover to speed cooling. See "Water is too hot" on page 33. If condition persists, contact your dealer or authorized service center.

COOL

If the hot tub water is more than 20 degrees F cooler than the temperature set point, the low speed of the two-speed pump and the heater will automatically activate to provide freeze protection. The hot tub will stay in this mode until the water temperature reaches 15 degrees below the set temperature. No corrective action is necessary.

FLO\*

FLOW SWITCH (Heater is deactivated. Pump may also be deactivated).

Proper flow of water is inhibited or a flow switch has malfunctioned. Check for proper water level. Check for clogged filter. Contact your dealer or service organization.

**\* NOTE:** THIS MESSAGE CAN ALSO APPEAR IF THE PUMP HAS NOT REGAINED PRIME AFTER THE HOT TUB HAS BEEN DRAINED AND REFILLED. IF YOU SUSPECT THAT THIS IS THE CASE, SEE THE INSTRUCTIONS ON PAGE 32 UNDER "**PUMP DOES NOT OPERATE...**"

Hold

Panel sensors have been pressed too many times in a short period of time. Because this could cause excessive wear on equipment components, panel sensors are temporarily deactivated. Panel sensors will automatically re-activate if no sensor is pressed for 30 seconds.

**HOT**

Circuit board temperature has exceeded acceptable limit. This message will disappear when the circuit board temperature drops below acceptable limit. If condition persists, provide shade for the equipment side of the hot tub.

**ICE**

**FREEZE PROTECTION**

A potential freeze condition has been detected. No action is required. Pump(s) operate until the hot tub is out of danger.

**PnL**

Communication between the control panel and the circuit board is faulty. Contact your dealer or service organization.

**----**

**"WATCHDOG"** (Hot tub is deactivated.)

A problem has been detected which could cause damage to the hot tub or its components. Contact your dealer or service organization.

**Sn1**

**OPEN SENSOR (heater disabled) OR  
SHORTED SENSOR (hot tub is deactivated)**

The high-limit temperature sensor is non-functional. This must be repaired only by a dealer or qualified service organization.

**Sn3**

**OPEN OR SHORTED SENSOR (heater disabled)**

The main sensor is non-functional. This must be repaired only by a dealer or qualified service organization.

**CELL**

**NOT ENOUGH SODIUM CHLORIDE.** Use AQUACHECK test strip to check the sodium chloride. Add as necessary. Press Jets button to reset the error message.

## Troubleshooting Procedures

In the unlikely event your hot tub is not working the way you believe it should, please first review all the installation and operating instructions in this manual and check the message on the panel display; second, if you are still not satisfied it is working properly, please follow the appropriate troubleshooting instructions.

### PROBLEM

### PROCEDURE

NONE OF THE COMPONENTS OPERATE (i.e. pump, light)

Check the control panel lights.

1. If there are letters or symbols displayed on the screen, refer to the previous section to determine meaning and action required.
2. If nothing appears on the screen:
  - a. Check the household circuit breaker
  - b. Contact you dealer or authorized service center

PUMP DOES NOT OPERATE AND ICON DOES

Depress "Jets" sensor.

1. If no sound is detected or if a "buzzing" sound is detected, turn off power to the hot tub and contact your dealer or service center.
2. If motor operates but no water flows to jets:
  - a. Pump may not be properly primed. See instructions below.
  - b. Contact dealer or authorized service center.
3. Make sure ISO-Pure is not in cleaning cycle.

#### **Pump Priming Instructions: *Turn Hot Tub Off!***

Remove filter and insert end of garden hose into filter pipe. Seal-off pipe opening around hose using a large, clean rag and turn on maximum water flow through the hose. After about 30 seconds, turn off water, remove hose and rag, reinstall filter and activate pump's high speed.

Another method of priming the hot tub's pump(s) is as follows:

1. Turn off the power to the hot tub.
2. Remove the handle from the Massage Selector supplied by the pump you are priming.
3. Loosen the Massage Selector's cap slightly (counter-clockwise), listening for the air to seep out.
4. Tighten the cap finger-tight, replace the handle and turn the hot tub's power back on.

(Note: This method must be used for the single-speed pump on two-pump models because these pumps are not connected to the filter.)

**IMPORTANT:** *If freezing conditions exist and pump is not operational, take measures to protect the system from freeze damage. See section titled "Winterizing".*

**POOR JET ACTION**

1. Make certain the pump is on high speed.
2. Check position of massage selectors (see Ill. 5 page 16.)
3. Open air control for the jet system selected.
4. Check for adequate water level.
5. Check for dirty filter.

**WATER IS TOO HOT.**

1. Reduce thermostat setting.
2. Reduce filtration cycle length. (Even without heater on, water temperature can increase from prolonged pump operation.)

**NO HEAT**

1. Check thermostat setting.
2. Keep the cover in place while heating.
3. If "heater on" indicator is lit (see Ill. 4.1), but no temperature rise is experienced after a reasonable period of time, contact your dealer or authorized service center.

Your Sundance Dealer is a trained service repair center. Should checking the above steps fail to correct the problem, please call your dealer so that he may arrange service.

Your Sundance Dealer's phone number: \_\_\_\_\_

Sundance builds the best hot tubs in the industry. Nonetheless, we are always striving to improve the quality and features of our products. Your input as a Sundance hot tub owner is a cherished part of this process. If you have any comments or suggestions, or if you wish to be informed on any new products for your hot tub, please write to us.

**CONGRATULATIONS** on your good taste and welcome to the happiest and most relaxed family in the world!
